

Caiman Lite

The Caiman Lite range (EXE and MDB) is known in the market for its compactness and simplicity, both in installation and use.

In its EXE version, Caiman Lite can work in “Price Holding” mode up to 100 prices, or can delegate price management to the vending machine. It is possible to connect a coin acceptor in pulse mode.

In the MDB version, Caiman Lite connects directly to the vending machines or to any coin changegiver.

Audit data can be retrieved with the Data Key, with a PC, or through a palmtop via an optional, external IrDA port. Data are available both in standard EVA-DTS and extended mode.

Easy to install and configure, Caiman Lite is ideal for operators who wish to offer cashless in combination with third-parties’ changegivers, or for those who plan to deploy cashless-only machines.

NOTE: Both Caiman Lite EXE and Caiman Lite MDB are available in the Mifare® version with the same characteristics and functionalities.

Caiman Lite Features
